If your child needs help signing in, please contact his or her teacher.

Getting started with IXL

IXL is a Web-based math and English language arts practice program. The program will allow us to individualize the learning experience for students so that they can work at their own pace to master the material we will cover. Your child can sign in to any computer or laptop with the username and password provided by his or her teacher or school administration. There are even iPad and Android apps to allow your child to practice on-the-go!

Making the most of IXL

To reinforce what your child has learned at school, have him or her practice on IXL at home! Your child has unlimited access to all IXL grade levels, so he or she can practice anywhere with Internet access. IXL breaks down topics into progressive skills for every grade level and content area, and provides immediate feedback with question-specific explanations for every incorrect answer. This makes it easy for your child to practice the material he or she needs to fill gaps in learning, keep up with the class, and even advance in topic areas of interest.

Monitoring progress

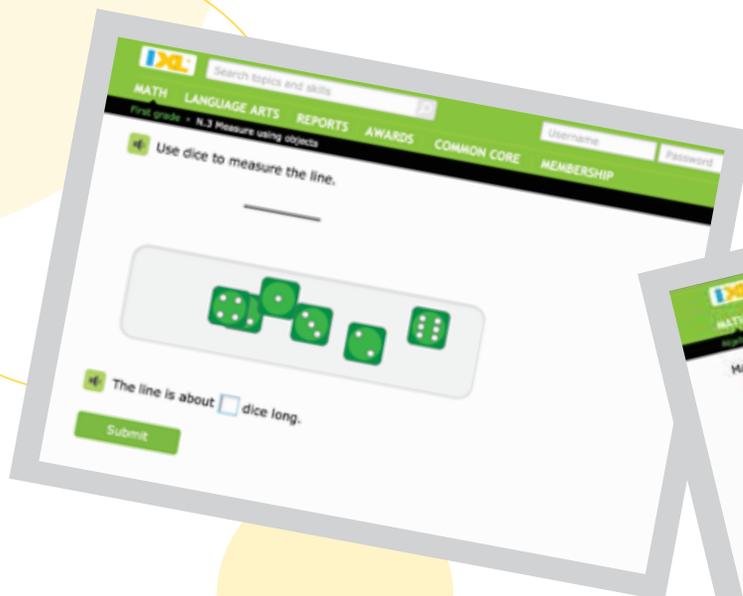

We want you to be as involved as possible in your child's education this year, and IXL will help keep you connected. When signed in to your child's account, a number of progress reports will be available to you, including the following that we recommend:

Report Card: View the skills your child has practiced, broken down by category and Common Core or state standard.

Trouble Spots: View just the skills that your son or daughter is struggling with so that you can provide targeted help at home.

The IXL SmartScore

When tracking your child's progress, you will notice that many of the reports display a SmartScore for each skill. This is not a percentage or standard scoring system, but is based on a unique algorithm that understands the learning process. The SmartScore takes into account not only the number of questions a student has answered correctly and incorrectly, but also the difficulty of the problems and the student's ability to answer correctly with consistency. It weighs recent answers more heavily to reflect the student's current understanding of the skill. The benefit of this system is that the score will adapt no matter how many questions your child answers, ensuring that every student always has the possibility of reaching his or her SmartScore goal!
